

Rinnai non-condensing, concentric water heaters and condensing water heaters use a different type of Rinnai / Ubbink venting.

Rinnai indoor water heaters are direct vent water heaters and therefore are certified and listed with the vent system. Only vent components that are certified and listed with the water heater model should be used. Using incorrect or unapproved venting with any Rinnai Product will void the warranty.

Rinnai / Ubbink Vent Systems and Applicable Models

Product	Rinnai Models
Rolux Condensing Vent System	Condensing models only
Rolux Vent System	Non-condensing, concentric models only

WARNING Using the Rolux Condensing Vent System components on non-condensing, concentric models or if improperly installed may result in carbon monoxide poisoning or fire.

The Rolux Condensing Vent System components contain a polypropylene exhaust and should ONLY be used with Rinnai condensing water heaters. Although these components are dimensionally compatible with Ubbink venting for non-condensing, concentric models, they should never be interchanged.

When purchasing or using Rinnai / Ubbink venting, ensure the proper type is used.

- Rinnai / Ubbink polypropylene (PP) venting will have a green “Condensing” label on each package.
- Each Rinnai / Ubbink polypropylene (PP) condensing vent component will have an orange Warning Label on the inside and outside pieces.

Condensing label on the packaging

Warning label on each individual vent piece
