

How to Use the #27103 Needle Threader

Threading a needle can be difficult and tedious, especially if you are doing lots of hand stitching where the needle gets re-threaded over and over. This needle threader will eliminate all those repeat attempts at threading; thread your needle in just one try. Just set the threader on your work table where it will wait patiently for your next hand sewing project! Lay the thread in place, insert the needle and slide a button. Instant threading.

You will need the following:

- Needle threader #27103
- Hand sewing needle, any size or style
- Sewing thread
- Scissors

What is it? The Needle Threader is a table-top tool with a mechanism on each side for threading large or small hand needles. Small buttons push out a threading wire that quickly pushes thread through the needle. Nothing could be simpler.

What are the parts called?

Actual size shown

How to Use the #27103 Needle Threader:

1. Select either the large eye or small eye funnel located on sides of threader. These are indicated by arrows pointing to the big hole or small hole.

2. Insert needle, eye-end down, into funnel with eye opening facing center of threader.

3. Lay thread beside funnel.

4. Slide button gently towards funnel. A small loop of thread will appear at funnel side. Release button.

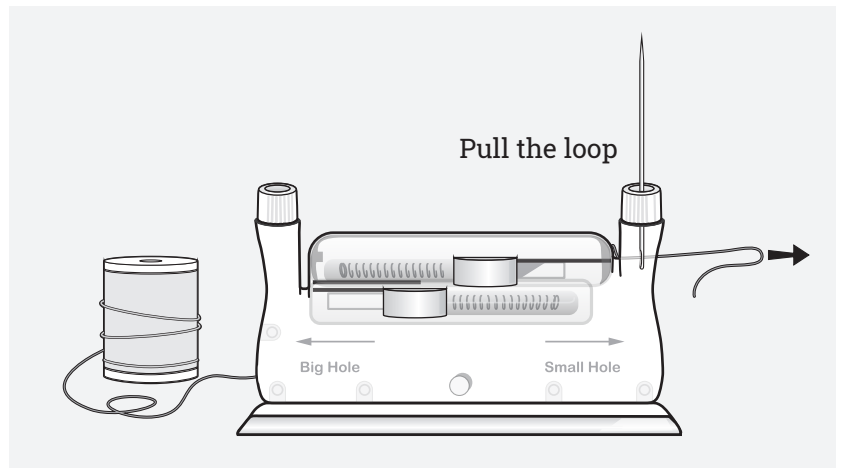

Can you precut the thread?
Yes, but leaving thread attached to the spool is the easiest process. When the threaded needle is pulled from the funnel, simply pull up as much thread as needed. Then cut.

TECHNIQUE TUTORIAL

How to Use the #27103 Needle Threader:

5. Pull loop until end of thread comes out.

6. Lift the threaded needle from funnel; cut thread to desired length.
