AisleLok® Bi-Directional Door Gap Seal Kit

By design, there is a small gap between our AisleLok® Bi-Directional Doors. Depending on the cabinet manufacturer and width of the aisle, this gap may be larger, especially if the aisle exceeds 48" (1219 mm) between cabinet or rack frames. While this gap has little to no impact on the effectiveness of the doors to reduce IT equipment intake air temperatures, we have created the AisleLok® Bi-Directional Door Gap Seal Kit for those who would like to cover the opening between the doors. The kit consists of plastic extrusions and a flexible sealing membrane that attach to the outer edge of each door. The sealing membrane is available in various widths to eliminate gaps up to 8.5" (215.9 mm).
