BATTERY BOOSTER CABLES

08860

Southwire has manufactured booster cables for several decades leading the marketplace with product innovations that include: No-Tangle™ cable twin extrusion, TPE insulation, no-shock clamp, UL listings, and copper-clad aluminum cable.

Some models feature Southwire's patented Polar-Glo™ clamp with triple-polarity identification: color-coding, indent stamping, and glow-in-the-dark labels. This clamp attaches firmly to both top post and side terminal batteries. All energized clamp surfaces are shielded to avoid short circuits and conductive clamp surfaces are recessed to prevent accidental contact.

- Jacket material exhibits rubber-like flexibility, high abrasion resistance, a -40° to 60° C temperature range, lighter in weight than other PVC, high resistance to almost all environmental exposures
