

## Forearm Crutches

DME Care Solutions Forearm Crutches are durable mobility aids designed for a wide range of users. Ideal for long-term use, the crutches feature sturdy forearm supports, comfortable hand grips, and tool-free dual arm and leg height adjustment for optimal comfort. Aluminum construction provides a stable mobility option for individuals ranging in height from youth to tall.

- Constructed from lightweight, anodized aluminum for durable, stable support
- Ergonomic, contoured hand grips and molded arm cuffs help reduce hand and wrist fatigue
- Independently adjustable leg and forearm sections allow a customized fit
- Suitable for long-term use across various settings, including home care, rehab facilities, and hospitals
