

Hardware Parts List:

- | |
|------------------|
| 2 - Bar Pull |
| 4 - Screws |
| 2 - Large Washer |
| 8 - Small Washer |
| 4 - Pivot Hinge |
| 4 - Strike Plate |
| 4 - Foam Pad |

CAUTION: Use care when handling doors. We recommend two people for the following assembly procedure.

1. Choose a location for the collector cabinet and refer to your cabinet set-up instructions for proper leveling procedures and safety strap assembly.
2. Locate and unpack the glass door panels.
3. Locate and unpack the door hardware.
4. Assemble one pivot hinge to the lower corner of the either door. Note:
 - Locate the pivot hinge on the opposite long edge of the holes for the Bar Pull as illustrated.
 - The side of hinge with visible screws should be on the inside of the cabinet after assembly is complete.
 - Snug hinge screws. Do not over tighten.
5. To attach the door to the cabinet, one person should place the pivot pin of the lower door hinge into the receiving hole of the cabinet. Use one large washer as illustrated.
6. The second person inserts a separate pivot hinge into the upper receiving hole and holds in place while the first person pivots the door within the upper hinge and snugs the set screw. Do not over tighten.
7. Align and adjust the door so it can pivot without interference.
8. Repeat steps 4-7 to install the second glass door.
9. Assemble the Bar Pull on each glass door. Snug each screw. Do not over tighten.
10. Insert a foam pad within the metal Strike Plate and install onto the glass door. Align the (4) Strike Plates so they make contact with the magnet catch as illustrated.
