IMPORTANT SAFETY INSTRUCTIONS

This product requires a three-prong grounded outlet. The installer must perform a ground continuity check on the power outlet box before beginning the installation to ensure that the outlet box is properly grounded. If not properly grounded, or if the outlet box does not meet electrical requirements noted (under ELECTRICAL REQUIREMENTS), a qualified electrician should be employed to correct any deficiencies.

CAUTION: For personal safety, remove house fuse or open circuit breaker before beginning installation to avoid severe or fatal shock injury.

CAUTION: For personal safety, the mounting surface must be capable of supporting the cabinet load, in addition to the added weight of this 63–85 pound (28.5–38.5 kg) product, plus additional oven loads of up to 50 pounds (22.7 kg) or a total weight of 113–135 pounds (51.3–61.2 kg).

CAUTION: For personal safety, this product cannot be installed in cabinet arrangements such as an island or peninsula. It must be mounted to BOTH a top cabinet AND a wall.

NOTE: For easier installation and personal safety, it is recommended that two people install this product.

IMPORTANT – PLEASE READ CAREFULLY. FOR PERSONAL SAFETY, THIS APPLIANCE MUST BE PROPERLY GROUNDED TO AVOID SEVERE OR FATAL SHOCK.

The power cord of this appliance is equipped with a three-prong (grounding) plug which mates with a standard three-prong (grounding) wall receptacle to minimize the possibility of electric shock hazard from this appliance.

You should have the wall receptacle and circuit checked by a qualified electrician to make sure the receptacle is properly grounded.

Where a standard two-prong wall receptacle is encountered, it is very important to have it replaced with a properly grounded three-prong wall receptacle, installed by a qualified electrician.

DO NOT, UNDER ANY CIRCUMSTANCES, CUT, DEFORM OR REMOVE ANY OF THE PRONGS FROM THE POWER CORD. DO NOT USE WITH AN EXTENSION CORD.

ELECTRICAL REQUIREMENTS

Product rating is 120 volts AC, 60 Hertz, 15 amps, 1.6 kilowatts. This product must be connected to a separate and dedicated supply circuit of the proper voltage and frequency. Wire size must conform to the requirements of the National Electrical Code or the prevailing local code for this kilowatt rating.

The power supply cord and plug should be brought to a separate and dedicated 15- to 20- ampere branch circuit single grounded outlet. The outlet box should be located in the cabinet above the microwave oven. The outlet box and supply circuit should be installed by a qualified electrician and conform to the National Electrical Code or the prevailing local code.

TOOLS YOU WILL NEED

MOUNTING SPACE

A 30" Space between cabinets must be 30" (76.2 cm) and unobstructed

B 13.8" If the cabinet depth is more than 13.8" (35 cm) the unit must be spaced out from the wall using materials sufficient to support 150lbs (68.2 kg) for top venting

C 24" Minimum height above cooking surface

D 1/4" Minimum clearance for cabinet door

- SEE PAGE FOR MOUNTING TEMPLATE
- FOLLOW INSTRUCTIONS ON TEMPLATE FOR POWER CORD CLEARANCE
- IF VENTING OUTSIDE - SEE HOOD EXHAUST SECTION

Installation Instructions

1 PLACEMENT OF THE MOUNTING PLATE

A. REMOVING THE MICROWAVE OVEN FROM THE CARTON/ REMOVING THE MOUNTING PLATE

- 1 Remove the installation instructions, use and care, exhaust adapter, turntable ring, shelf, filters, glass tray and the small hardware bag. Do not remove the Styrofoam protecting the front of the oven.

- 2 Fold back all 4 carton flaps fully against carton sides. Then carefully roll the oven and carton over onto the top side. The oven should be resting in the Styrofoam.

- 3 Pull the carton up and off the oven.

- 4 Cut the middle of the outer protective plastic bag to remove the mounting plate

- 5 Remove the screws from each end of the mounting plate. The plate will be used as a rear wall template and for mounting. Reinstall the screws in the holes where they were removed.

B. FINDING THE WALL STUDS

- 1 Find the studs, using one of the following methods:
- A. Stud finder – a magnetic device which locates nails.
 - B. Use a hammer to tap lightly across the mounting surface to find a solid sound. This will indicate a stud location.
- 2 After locating the stud(s), find the center by probing the wall with a small nail to find the edges of the stud. Then place a mark halfway between the edges. The center of any adjacent studs should be 16" (40.6 cm) or 24" (61 cm) from this mark.
- 3 Draw a line down the center of the studs.

THE MICROWAVE MUST BE CONNECTED TO AT LEAST ONE WALL STUD.

Installation Instructions

C. DETERMINING WALL PLATE LOCATION UNDER YOUR CABINET

Plate position - beneath flat bottom cabinet

Draw a vertical line on the wall at the center of the 30" wide space.
Tape the Rear Wall Template onto the wall matching the centerline and touching the bottom of the cabinet.

Plate position - beneath framed recessed cabinet bottom

Draw a vertical line on the wall at the center of the 30" space.
Tape the Rear Wall Template onto the wall matching the centerline and touching the bottom cabinet frame.

Plate position - beneath recessed bottom cabinet with front overhang

Your cabinets may have decorative trim that interferes with the microwave installation. Remove the decorative trim to install the microwave properly and to make it level.

THE MICROWAVE MUST BE LEVEL.

Use a level to make sure the cabinet bottom is level.

If the cabinets have a front overhang only, with no back or side frame, install the mounting plate down the same distance as the front overhang depth. This will keep the microwave level.

- 1 Measure the inside depth of the front overhang.
- 2 Draw a horizontal line on the back wall an equal distance below the cabinet bottom as the inside depth of the front overhang.
- 3 For this type of installation with front overhang only, align the mounting tabs with this horizontal line, not touching the cabinet bottom as described in Step D.

Installation Instructions

D. ALIGNING THE WALL PLATE

CAUTION: Wear gloves to avoid cutting fingers on sharp edges.

- 1 Draw a vertical line on the wall at the center of the 30" wide space.
- 2 Draw a horizontal line on the wall at the bottom of "Rear Wall Template".
- 3 Find a wall stud in area "E" of mounting plate. Refer to section 1B. Finding the wall studs.
- 4 For attaching the mounting plate into stud drill a 3/16" hole into wood stud. Drill a 5/8" hole for toggle bolt in 1 other location (Hole A or Hole B)
NOTE: DO NOT MOUNT THE PLATE AT THIS TIME.

NOTE: Holes A and B are inside area E. If neither of Holes A and B are not in a stud, find a stud somewhere in area E and draw a circle to line up with the stud. It is important to have at least one wood screw mounted firmly in a stud to support the weight of the microwave. Set the mounting plate aside.

Installation Instructions

2 INSTALLATION TYPES (Choose A, B or C)

This microwave oven is designed for adaptation to the following three types of ventilation:

- A. Outside Top Exhaust (Vertical Duct)
- B. Outside Back Exhaust (Horizontal Duct)
- C. Recirculating (Non-Vented Ductless)

NOTE: This microwave is shipped assembled for Recirculating. Select the type of ventilation required for your installation and proceed to that section.

A RECIRCULATING (NON-VENTED DUCTLESS)

See page 10

Models are shipped for recirculating exhaust. A disposable charcoal filter is already installed to help remove smoke and odors.

B OUTSIDE BACK EXHAUST (HORIZONTAL DUCT)

See page 16

C OUTSIDE TOP EXHAUST (VERTICAL DUCT)

See page 19

NOTE: If you plan to recirculate the exhaust back into the kitchen - proceed to page 10.
If you are planning to vent the exhaust outside, turn to page 13.

Installation Instructions

A RECIRCULATING (Non-Vented Ductless)

INSTALLATION OVERVIEW

- A1. Attach Mounting Plate to Wall
- A2. Prepare Top Cabinet
- A3. Check Blower Plate
- A4. Mount the Microwave Oven
- A5. Install or change Charcoal Filter

IMPORTANT NOTES:

- Make sure the screws for the blower motor and blower plate are securely tightened when they are reinstalled. This will help to prevent excessive vibration.
- Make sure the motor wiring has been properly routed and secured, and that the wires are not pinched.

A1. ATTACH THE MOUNTING PLATE TO THE WALL

Attach the plate to the wall using toggle bolts. At least one wood screw must be used to attach the plate to a wall stud.

NOTE: If the cabinet depth including the cabinet doors is more than 13.8" the unit must be spaced out from the wall using materials able to support 150 lbs to allow proper top vent air exhaust/intake.

13.8" max
(35 cm)

- 1 Remove the toggle wings from the bolts.
- 2 Insert the bolts into the mounting plate through the holes designated to go into drywall and reattach the toggle wings to $\frac{3}{4}$ " (19 mm) onto each bolt.

To use toggle bolts:

- 3 Place the mounting plate against the wall and insert the toggle wings into the holes in the wall to mount the plate.

NOTE: Before tightening toggle bolts and wood screw, make sure the bottom of the mounting plate touch the bottom of the cabinet when pushed flush against the wall and that the plate is properly centered under the cabinet.

CAUTION: Be careful to avoid pinching fingers between the back of the mounting plate and the wall.

- 4 Tighten all bolts. Pull the plate away from the wall to help tighten the bolts.

Installation Instructions

A2. USE TOP CABINET TEMPLATE FOR PREPARATION OF TOP CABINET

You need to drill holes for the top support screws and a hole large enough for the power cord to fit through.

- Read the instructions on the TOP CABINET TEMPLATE.
- Tape it underneath the top cabinet.

NOTE: Adjust top template accordingly if the microwave is spaced out from the wall due to a cabinet depth (including cabinet doors) greater than 13.8".

- Drill the holes, following the instructions on the TOP CABINET TEMPLATE.

CAUTION: Wear safety goggles when drilling holes in the cabinet bottom.

A3. CHECK BLOWER PLATE

- Place the microwave in its upright position, with the top of the unit facing up.
- Check to see that the blower plate is correctly installed on the unit.

A4. MOUNT THE MICROWAVE OVEN

FOR EASIER INSTALLATION AND PERSONAL SAFETY, WE RECOMMEND THAT TWO PEOPLE INSTALL THIS MICROWAVE OVEN.

IMPORTANT: Do not grip or use the handle or heat shield during installation. Do not remove the cardboard spacers between the heat shield and door.

NOTE: If your cabinet is metal, use the nylon grommet around the power cord hole to prevent cutting of the cord.

NOTE: We recommend using filler blocks if the cabinet front hangs below the cabinet bottom shelf.

IMPORTANT: If filler blocks are not used, case damage may occur from overtightening screws.

NOTE: When mounting the microwave oven, thread power cord through hole in bottom of top cabinet. Keep it tight throughout Steps 1–3. Do not pinch cord or lift oven by pulling cord.

- 1 Lift microwave, tilt it forward, and hook slots at back bottom edge onto four lower tabs of mounting plate.

- 2 Rotate front of oven up against cabinet bottom.
- 3 Insert a self-aligning screw through top center cabinet hole. Temporarily secure the oven by turning the screw at least two full turns after the threads have engaged (It will be completely tightened later.) Be sure to keep power cord tight. Be careful not to pinch the cord, especially when mounting flush to bottom of cabinet.

Cabinet Front

- 4 Attach the microwave oven to the top cabinet.

Installation Instructions

A4. MOUNT THE MICROWAVE OVEN (cont.)

- 5 Insert 2 self-aligning screws through outer top cabinet holes. Turn two full turns on each screw.

- 6 Tighten the outer two screws to the top of the microwave oven. (While tightening screws hold the microwave oven in place against the wall and the top cabinet.)

- 7 Install grease filters. See the Use & Care Manual packed with the microwave.

A5. INSTALLING OR CHANGE THE CHARCOAL FILTER (Some Models)

NOTE: The charcoal filter is factory installed on some models. Refer to the Use and Care to see if yours is factory installed and for replacement information.

For models without the recirculation filter access door, follow these steps to replace or install a charcoal filter.

- A 5.1 Unplug microwave oven or disconnect power.

- A 5.2 Remove the two vent plate screws located on top of the microwave using a #1 phillips screwdriver.

- A 5.3 Change the charcoal filter from the vent plate.

Charcoal Filter

- A 5.4 Replace the vent plate, reinstall the two vent plate screws located on top of the microwave using a #1 phillips head screwdriver.

- A 5.5 Close the microwave door. Plug in microwave oven or reconnect power.

INSTALLATION INSTRUCTIONS FOR EXTERNAL EXHAUST DUCTING

NOTE: If you need to install ducts, note that the total duct length of 3¼" x 10" (8.2 x 25.4 cm) rectangular or 5" (12.7 cm) diameter / 6" (15.2 cm) diameter round duct should not exceed 120 equivalent feet (36.5 m).

Outside ventilation requires an EXTERNAL EXHAUST DUCT. Read the following carefully.

NOTE: It is important that venting be installed using the most direct route and with as few elbows as possible. This ensures clear venting of exhaust and helps prevent blockages. Also, make sure dampers swing freely and nothing is blocking the ducts.

Exhaust connection:

The exhaust adaptor has been designed to mate with a standard 3¼" x 10" (8.2 x 25.4 cm) rectangular duct.

If a round duct is required, a rectangular-to-round transition adaptor must be used. 5" (12.7 cm) / 6" (15.2 cm) diameter duct is acceptable to use.

Maximum duct length:

For satisfactory air movement, the total duct length of 3¼" x 10" (8.2 x 25.4 cm) rectangular or 5" (12.7 cm) diameter / 6" (15.2 cm) diameter round duct should not exceed 120 equivalent feet (36.5 m).

Elbows, transitions, wall and roof caps, etc., present additional resistance to airflow and are equivalent to a section of straight duct which is longer than their actual physical size. When calculating the total duct length, add the equivalent lengths of all transitions and adaptors plus the length of all straight duct sections. The chart below shows you how to calculate total equivalent ductwork length using the approximate feet of equivalent length of some typical ducts.

DUCT PIECES		EQUIVALENT LENGTH	x	NUMBER USED	=	EQUIVALENT LENGTH
	Rectangular-to-Round Transition Adaptor*	5 ft (1.5 m)	x	()	=	ft or m
	Wall Cap	40 ft (12.2 m)	x	()	=	ft or m
	90° Elbow	10 ft (3 m)	x	()	=	ft or m
	45° Elbow	5 ft (1.5 m)	x	()	=	ft or m
	90° Elbow	25 ft (7.6 m)	x	()	=	ft or m
	45° Elbow	5 ft (1.5 m)	x	()	=	ft or m
	Roof Cap	24 ft (7.3 m)	x	()	=	ft or m
	6" (15.24 cm) Round or 3¼" x 10" Rectangular (8.2 x 25.4 cm)	1 ft (0.3 m)	x	()	=	ft or m
Total Ductwork					=	ft or m

* IMPORTANT: If a rectangular-to-round transition adaptor is used, the bottom corners of the damper will have to be cut to fit, using the tin snips, in order to allow free movement of the damper.

Equivalent lengths of duct pieces are based on actual tests and reflect requirements for good venting performance with any vent hood.

Installation Instructions

EXTERNAL EXHAUST DUCTING

OUTSIDE TOP EXHAUST (EXAMPLE ONLY)

The following chart describes an example of one possible ductwork installation.

DUCT PIECES		EQUIVALENT LENGTH	x	NUMBER USED	=	EQUIVALENT LENGTH
	Roof Cap	24 ft (7.3 m)	x	(1)	=	24 ft or 7.3 m
	12 Ft. (3.6 m) Duct 6" 15.2 cm Round	1 ft (0.3 m)	x	(12)	=	12 ft or 3.6 m
	Rectangular-to-Round Transition Adaptor*	5 ft (7.6 m)	x	(1)	=	5 ft or 15.2 m
Equivalent lengths of duct pieces are based on actual tests and reflect requirements for good venting performance with any hood.						
Total Ductwork =						41 ft or 10.4 m

* IMPORTANT: If a rectangular-to-round transition adaptor is used, the bottom corners of the damper will have to be cut to fit, using the tin snips, in order to allow free movement of the damper.

OUTSIDE BACK EXHAUST (EXAMPLE ONLY)

The following chart describes an example of one possible ductwork installation.

DUCT PIECES		EQUIVALENT LENGTH*	x	NUMBER USED	=	EQUIVALENT LENGTH
	Wall Cap	24 ft (7.3 m)	x	(1)	=	24 ft or 7.3 m
	3 Ft. Straight Duct 3 1/4" x 10" (8.2 x 25.4 cm) Rectangular	1 ft (0.3 m)	x	(3)	=	3 ft or 0.9 m
	90° Elbow	25 ft (7.6 m)	x	(2)	=	50 ft or 15.2 m
Equivalent lengths of duct pieces are based on actual tests and reflect requirements for good venting performance with any hood.						
Total Ductwork =						74 ft or 20.9 m

NOTE: For back exhaust, care should be taken to align exhaust with space between studs, or wall should be prepared at the time it is constructed by leaving enough space between the wall studs to accommodate exhaust.
