

## Systemic Design

Systemic design is a holistic approach to design that considers the entire system and its interactions with the environment. It focuses on the relationships between different components and how they work together to create a cohesive and effective solution.

Systemic Design	Traditional Design	Design Thinking
Focuses on the whole system and its interactions.	Focuses on individual components and their functions.	Focuses on understanding user needs and creating user-centered solutions.
Emphasizes collaboration and interdisciplinary teams.	Emphasizes individual roles and responsibilities.	Emphasizes empathy and user-centered design.
Considers the system's impact on the environment and society.	Focuses on the system's internal structure and processes.	Focuses on the user's experience and behavior.
