

2-LIGHT, 3-POLE, 40A RELAY (160W) WIRE HARNESS

INSTALLATION INSTRUCTIONS

IMPORTANT:

Please read all instructions before beginning installation. These guidelines are provided in good faith to help prevent any issues arising from errors during installation. The manufacturer of this product shall not be held responsible for any user actions taken or not taken during installation. There are many details of the installation that are assumed to be general mechanical knowledge to experienced installers; which are not detailed in these instructions. These installation guidelines are intended to serve as professional recommendations and are not as a step-by-step, fail-safe installation checklist. Selection of an experienced installer is the sole responsibility of the project owner.

STEP BY STEP INSTALLATION INSTRUCTIONS

ADVENTURE

FURTHER®

Parts Included: (1) Wire Harness, (1) Switch, (1) Relay, (6) Wire Ties

1. Mounting Your Lights:

After choosing a location to mount your lights, install and loosely tighten before installing the wire harness.

2. Wiring Your Lights:

Before starting, make sure to remove the 3A fuse in-line to the switch and relay for safety.

- 1. Begin by routing the KC wire harness safely from the battery (or power source), away from any moving parts and connect the lights to the harness.
- 2. Next, route the three switch leads (spade connectors) toward the desired switch location. To install the switch, drill a ³/₄" hole in the desired location to press the switch into. (Note: Do not install switch until you have the switch wires routed to the switch location, and then attach the switch wires accordingly before pressing the switch into the mounting hole). Connect the switch wires as follows: WHITE to Terminal-3 behind (=) indicator on switch, YELLOW to Terminal-2 (center), and GREEN to Terminal-1 behind (-) indicator on switch.
- 3. Mount the Relay close to the battery with blades facing down (sheet metal screw provided). Connect the Yellow Power lead (with ring terminal) to the (+) Positive side of the battery. Connect the Black Ground lead (with ring terminal) to the (-) Negative side of the battery or chassis ground.

3. Connect & Test:

TERMINAL

After the harness has been secured and the Power & Ground properly connected. Re-install the removed 3A fuse and the relay. Test the lights by toggling both Low (-) and High (=) on the Rocker Switch.
