

10 DYNAMICS

The first
 step in the
 design process
 is to define the
 problem.

The second
 step is to
 define the
 objectives of the
 design.

The third
 step is to
 define the
 constraints of the
 design.

The fourth
 step is to
 define the
 requirements of the
 design.

The fifth step is to define the performance criteria of the design.

The sixth step is to define the design parameters of the design.
