## STONE TILE CARE & MAINTENANCE

Natural stone is a quarried product meaning no two pieces are alike. All stone has inherent variances. These variances may include color, shade, markings, voids, pitting, veins, and difference in sheen. It is standard practice to repair some variations with waxing, grinding, or filling. Normal wear can cause cracks or voids to appear which can be repaired with floor grout or epoxy. These characteristics are part of stones natural beauty and do not impact the function of the product.

Proper maintenance is crucial to keep natural stone installations looking beautiful. Natural stone is porous by nature and requires different maintenance from ceramic or porcelain tile. This includes using appropriate cleaning materials, sealing, and at times a stone restoration service. Virginia Tile can recommend cleaning and maintenance products and services. Virginia Tile highly recommends testing out any new cleaning and maintenance product on a small discreet area before determining whether to use the product on entire installations.
