

Traceable Rodder

Locate Pipe With Minimal Excavation

Connect a signal transmitter to the Duct Hunter™ to energize unit with a specific frequency. When rod is pushed into underground pipe, the signal radiates through the soil to the surface.

A signal receiver detects the frequency applied to the Duct Hunter™, allowing the entire buried utility pipe to be traced and marked continuously from above ground by one man without digging.

- Trace To Depths Up To 10'
- Locate Sewer Laterals To Confirm No Cross Bore Has Occurred
- Locate Ductile Iron, Plastic, Tile Or Concrete Pipe
- Rod's ferrule attaches to sonde, roller guide or pulling eye
- Accessory kit included
- Sonde adapters available
