

MEGALODON (TOOTH)

"There are no fossils in
the wrong place."

- Richard Dawkins,
Biologist

What did I look like?

The Megalodon shark had 276 teeth and each tooth ranged from three to seven inches long.

Where did I live?

Megalodons lived in oceans around the world.

Fun Fact

Nobody has ever seen a Megalodon, so scientists can only guess what they looked like based on the size of their teeth.

What did I eat?

Megalodon sharks ate large, meaty fish including other sharks, and they likely ate dolphins and whales, too.

How long did I live?

Megalodons lived up to 100 years.

Where can you find me?

Megalodon teeth have been found all around the world.

How long ago did I live?

Megalodon sharks lived during the Miocene and Pliocene epochs.

How big or small was I?

The Megalodon shark was longer than a school bus and weighed more than 10 elephants.
