AirFit™ N30i

A more natural mask experience

ResMed AirFit™ N30i features a top-of-head tube design and nasal cradle cushion with ResMed QuietAir™ diffused venting technology that allows patients the freedom to sleep comfortably and quietly in the position of their choice. The SpringFit frame is designed to adapt to each patient's face; having only two frame sizes helps streamline fitting time and SKU management.

AirFit N30i highlights

Quick-release elbow

allows for easy disconnection. The pinch-clip elbow stays attached to the tubing to ensure parts do not get stuck or lost.

SpringFit frame

automatically adjusts to different facial profiles, helping provide an accurate fit the first time.

Top-of-head design gives patients the freedom to sleep in any position and closer to their bed partner.

Soft sleeves designed for added comfort and reduction in facial marks.

NEW Curved cradle cushion with softer silicone chassis allows the cushion to flex and adapt as users switch sleep positions. It's also interchangeable with AirFit P30i nasal pillows cushion.

QuietAir diffused venting technology breaks up exhaled air for an experience that is 57% quieter than the original design.^{1,2}

Nearly three-quarters of current N30i mask users who tried the redesigned AirFit N30i cushion preferred it to the original cushion design, in a recent study. Cushion comfort was the top reason for preferring the new design to the original.³

Nasal cradle mask

Fitting guide for AirFit N30i

- 1 Pull the frame and headgear over the head until the elbow is positioned on top and the headgear is behind the head.

- 2 Place the cushion under the nose.

- 3 Tighten or loosen the headgear until the cushion fits comfortably under the nose.

- 4 Squeeze the side buttons on the elbow and detach from the frame.

- 5 Connect the air tubing from the device to the elbow.

- 6 Reattach the elbow to the frame. The mask is now ready to use.

Additional options

For patients with longer hair, we recommend feeding their hair through the back of the headgear. If tied in a ponytail, it should sit high enough to fit comfortably through the back of the headgear.

Refer to the user guide for further instructions and complete labeling information including indications, contraindications, warnings and precautions.
