

A Solenis Company

Compatibility

Tough on pathogens, not on people or assets.

What is Compatibility?

Compatibility is the ability of disinfectants to be used in conjunction with medical equipment and surfaces safely and effectively without causing adverse reactions.

Why it matters...

The improper selection and/or use of disinfectants can have a negative impact on medical equipment and surfaces. The majority of these impacts are cosmetic: increased wear, discoloration, or microcracking. Many visual changes are avoidable with staff training on proper disinfectant use. Improper use can result in functional changes, such as impaired screen visibility or compromised device functionality. Evaluating your equipment compatibility with your preferred disinfectants is an essential infection prevention step to ensure patient safety and the longevity of your medical devices.

How Diversey Can Help

Material Evaluations

Evaluate product compatibility on the most common materials in healthcare.

Custom Compatibility Audit

Provide make and models for critical assets and receive customized recommendation.

Compatibility Database

Get answers from our compatibility team fast with a database of IFU approvals, customer use histories, and historical records of incompatibility.

Instructions for Use (IFU) Library

Need an IFU? Diversey has a library of IFUs to share.

Medical Device Partners

Diversey maintains a network of equipment manufacturer and works to continuously test products on medical devices to ensure compatibility.
