

SALIVA EJECTORS

Dynarex Saliva Ejectors are designed to provide effective suctioning to help remove excess moisture during dental procedures. The flexible tubing retains its shape while allowing for easy positioning. Strategically placed aspiration holes help reduce the risk of blockages by minimizing contact with tongue and mouth tissues.

- Flexible dental tool designed to provide efficient suctioning during procedures and exams
- Crafted from durable materials to retain shape for optimal performance
- Features aspiration holes to help prevent blockage from tongue and mouth tissues
- Single-use and disposable for optimal hygiene
- Not made with natural rubber latex
