

SONANCE

TECHNICAL NOTE

TECHNICAL NOTE FOR IMPORTING A SPEAKER PRESET LIBRARY IN BLAZE BY SONANCE POWERZONE CONNECT AMPLIFIERS

DOWNLOAD LIBRARY

1. Download Speaker Preset library file from sonance.com. If downloading speaker preset library file for another brand, or personal library, skip this step.
2. Browse to the location of the file that was downloaded and unzip.
3. The file extension for a full library file is .zcl. If you have a .zcp extension, this is an individual preset.

IMPORTING A LIBRARY INTO THE AMPLIFIER

1. Open Amplifier Web UI by browsing to the amplifiers IP address or with the Blaze PowerZone Control app.
2. Go to SETTINGS TAB>SPEAKER LIBRARY.
3. Click 'IMPORT'. A new window will open.
4. Click the attachment icon and locate the saved speaker library to load.
5. Select 'LOAD' to import the library.
6. The import process is now complete. Select any of the presets in the library in the OUTPUT tab in the amplifier.
7. Importing a library will overwrite any existing library on the amplifier. If additional presets need to be added to an existent library, see the Tech Note on Managing Speaker Preset Libraries.
