

## INTERMITTENT CATHETERS

### ITEMS 4981-4986, 4991-4995

Dynarex Intermittent Catheters are high-quality PVC catheters designed to help manage bladder drainage. The Catheters feature smooth tips for improved comfort and offset drainage eyelets to help facilitate flow. The Catheters are color-coded for easy size identification and come in both male and female varieties.

- High-quality PVC catheters designed to effectively manage bladder drainage
- Smooth, straight tips allow for comfortable insertion
- Polished, offset drainage eyelets help facilitate urine flow
- Sterile and individually sealed for optimal hygiene
- Color-coded by size to provide easy identification
- Frequently used in cases of urinary retention, bladder obstruction, paralysis, or loss of sensation
- Available in both male and female styles
- Not made with natural rubber latex
