Also known as Tapping Screws. Used in all light sheet metal work in all kinds of applications and products. Sheet Metal Screws are used to join sheet metals, metal to wood and to join other types of soft and/or thin unthreaded materials. These screws tap their own threads and are not intended to be disassembled often.

These machine screws are used with nuts or directly into a female threaded receptacle to fasten metal parts together. They are installed into an existing or predrilled, pre-tapped hole and are fully threaded. Measurements are made from the underside of the head to the tip of the screw to obtain fastener length.
