

EXTENSION DOWNRODS

MORE AND MORE HOMES ARE BEING CONSTRUCTED WITH HIGHER CEILINGS. A HUNTER 3/4" EXTENSION DOWNROD SETS THE FAN AT THE PROPER HEIGHT FOR OPTIMUM PERFORMANCE. ALL HUNTER EXTENSION DOWNRODS MATCH HUNTER FANS FOR FIT AND FINISH, AND HAVE TAPERED THREADS FOR DEEPER ENGAGEMENT.

REFER TO CHART FOR AVAILABLE FINISHES AND SIZES.

Extension Downrods for High Ceilings

For cooling, it is most efficient to have the blades 8 to 9 feet above the floor. For ceilings higher than 8 feet, the position of the ceiling fan is very important. For example, a 14 foot ceiling would need a 5 foot extension downrod to position the blades at 8 feet, since you need to allow one foot from the motor top to the bottom of the switch housing.

Conversely, for heat reclamation, it is most important to have the motor mounted within 1 to 2 feet from the ceiling for most efficient operation.

Generally, you will use your fan most often for cooling rather than heat reclamation, so it is recommended to use an extension downrod that lowers your fan to hang 8 to 9 feet from the floor. In those instances where heat reclamation is the only use, you would mount your fan with

the standard mounting kit included with the fan. Refer to the chart on the next page for available lengths and finishes.

Important: All Hunter fans use 3/4" extension downrods. Most other fans specify 1/2" downrods. Certain Hunter Original® fans require special vaulted ceiling mounts when installed on angled ceilings.
