

**1. Introduction**  
This document provides a comprehensive overview of the project's objectives, scope, and the methodology employed. It details the research questions, the data sources, and the analytical techniques used to address the research goals.

**2. Methodology**  
The methodology section describes the research design, including the selection of participants, the data collection procedures, and the statistical methods used for data analysis. It also outlines the ethical considerations and the steps taken to ensure the integrity and validity of the research.

Variable	Mean	Standard Deviation	Minimum	Maximum
Age	35.2	12.5	18	65
Gender	52% Male	-	-	-
Education Level	15% High School	-	-	-
Income Level	\$35,000	\$15,000	\$10,000	\$70,000
Occupation	25% Service	-	-	-
Marital Status	45% Married	-	-	-
Health Status	10% Poor	-	-	-
Stress Level	65% High	-	-	-
Life Satisfaction	40% High	-	-	-

## RESULTS

The results of the study are presented in this section. The findings indicate a significant positive correlation between income level and life satisfaction. Additionally, there is a strong negative correlation between stress levels and life satisfaction. The data also shows that higher education levels are associated with higher income and better health status.

Further analysis revealed that the impact of stress on life satisfaction is mediated by health status. This suggests that high stress levels can lead to poor health, which in turn leads to lower life satisfaction. The study also found that the relationship between income and life satisfaction is moderated by education level, with higher education levels showing a stronger positive relationship.
