

## WHY CHOOSE OATEY QUIET PIPES HAMMER ARRESTORS?

Try Oatey Quiet Pipes® Hammer Arrestors to help solve current and potential water hammer problems. Quiet Pipes use a piston design to help absorb the water shock in the system. When a valve is closed abruptly, the water moves into the pressurized chamber of the hammer and the water pressure is absorbed to prevent banging within the pipeline. Once the water flow comes out of the chamber, it is dissipated to the rest of the water line.

- Quiet Pipes® utilize a polypropylene **piston design** with two NBR O-rings to absorb the shock in the system.
- Oatey Quiet Pipes® water hammer arrestors carry a **limited warranty** that is equal in duration to the lifetime of the plumbing system in which they are installed. All other terms and conditions of the Limited Warranty shall apply to these products. See [Oatey.com/warranty](http://Oatey.com/warranty) for warranty details.
- Quiet Pipes come in a **range of connection types** including MIP, CPVC, PEX and more, saving plumbers time and eliminating the need for costly transition jobs.
- Spec'd for the pros, Quiet Pipes will go head-to-head with any water hammer arrestor manufacturer, and outperform the competition in nearly every major category.
- Quiet Pipes conform to **ANSI/ASSE 1010–2004** and are listed and approved for installation with no access panel required.
