

Schlage **Residential Construction** Keying Solutions

Schlage residential construction keying provides security control of a site, managing access for multiple tradespeople under one key. Clients get peace of mind knowing that once the homeowner key is inserted into the lock, the construction key is disabled.

Solution 1 - cylinder only

A construction keying system is used to allow contractors building access during construction, and prevent entry by the same contractors after the building has been completed. On completion of the building the home owner is presented their own keys, once the handover key is inserted into the cylinder and rotated, the construction key will become inoperative.

- Restricted locks and cylinders can be supplied upon request
- Schlage cylinders work with all locks for whole of house
- No restriction on key duplication
- Building Partnership Program members are entitled to 25 free construction keys and 4 free homeowner keys per project

Solution 2 - cylinder and lock

Designed to protect door hardware during construction. Nominated entry sets and cylinders are used during construction, hardware is then changed over to the specified hardware prior to handover, preventing door hardware damage, whilst maintaining high security of the site.

- Restricted locks and cylinders can be supplied upon request
- Schlage Regent Terrace entry knobset is the most cost-effective for a construction lock
- Any Schlage deadbolt can be used for a construction lock
- Construction locks can be reused on another project
- Building Partnership Program members are entitled to 25 free construction keys and 4 free homeowners keys per project.

Trust your home to Schlage.
