

THERMAL COMFORT SYSTEM

The Thermal Comfort System enhances your bathing experience with a special heating pad built right into your neck and shoulder areas while you soak! Easier yet; you can simply sit in the bathtub without water and enjoy the feel of heat penetrating deeply to soothe your sore and aching muscles.

TILE FLANGES

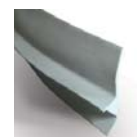

Our tile flange options are great for two or three wall installations. The tile flange provides a barrier to assure water does not drip behind the tub which could cause unnecessary water damage.

Molded Tile Flange
(Factory installed)

Metal Tile Flange
(Factory installed)

Rubber Tile Kit
(Field installed)

VIBRO SONIC SYSTEM

We just made relaxing in a bathtub that much better! Not only do we offer a complete soothing, relaxing experience in our state of the art baths and jetted tubs, but now we have added a massage system that will take you over the top! A system that will melt your tensions away!

WASTE + OVERFLOW

A feature used to drain most bathtubs:
Cable Drive – Americh offers a cable-drive waste & overflow for use on most of our bathtubs. The cable-drive drain has less moving parts inside the tubing, reducing the possibility of clogging.

Cable Drive

Exposed Drain

Linear Overflow

Exposed Drain – primarily used for free-standing bathtubs. The exposed drains are available in several illustrious metallic finishes.

Linear Overflow – a slotted drain provides a more contemporary look.
