# CARE AND MAINTENANCE

## NATURAL STONE CARE & MAINTENANCE

---

Natural stone is a porous material that can absorb bacteria, dirt, liquids, and other grime that we see in our home.

A sealer will provide the protection that your natural stone needs. Sealing will help stop bacteria from growing, which can weaken your stone and increase wear and tear. Before you start sealing make sure you thoroughly clean the stone. You don't want to seal over any grime.

Cleaning Natural Stone is important to remove any bacteria and grime before you apply sealer.

- Use pH balanced cleaners or soapless detergents and soft bristle brushes for daily cleaning. Wipe all spills as soon as they happen!
- Most sealer brands have specific cleaning solutions applicable for natural stone.
- If heavy duty cleaning is required, first try to solve with pH balanced cleaners, which can include scouring cleaners and poultices that help extract the stain. Always test abrasive or untested cleaning solutions in an inconspicuous area to evaluate if it is suitable for the tile.
- If an acidic cleaner is deemed necessary, a light solution of sulfuric acid is the safest and most recommended in cleaning difficult stone or grout problems. Be sure to rinse the area well after cleaning.

**VIRGINIATILE**

Design that shapes living.

Good design is born of creativity and imagination, but as we build and renovate, update and expand, the materials we select will define the quality of the spaces we live in beyond what meets the eye.
