

3M™ Dual Lock™ Reclosable Fasteners Instructions

Carstens 3M™ Dual Lock™ Reclosable Fasteners allow you to easily mount objects to workstations with no tools necessary. Use these adhesive strips to mount CPUs, storage containers, accessories, and more.

To install, follow the steps below.

Step 1 - Prep Your Surfaces

To ensure proper adhesion, clean both the workstation surface and the object's surface thoroughly to remove any dirt, grease, or dust.

Step 2 - Choose A Mounting Method

To mount an object that will not need to be removed or adjusted, you can mate both sides of the fastener strip directly overlapping for maximum strength. For objects that might need to be removed or serviced from time-to-time like CPU boxes, we suggest using an "X" pattern to mate the two strip sides.

Step 3 - Apply The Strips

To use, simply remove the liner, adhere one side of the Dual Lock strip to the object being hung and apply consistent pressure to attach. Repeat these steps with the other side of the strip, by applying to the workstation surface where you would like the object to be mounted.

Step 4 - Mate And Secure

Apply firm and even pressure to mate the object to the workstation until you hear an audible "click" or "snapping" sound. Test the object to ensure it is properly secure.

Please note, additional strips may be needed depending on the object's weight and shape. Strips can be cut to length as desired.
