TACTICAL SIDE POUCH INFLATABLE FLOTATION ASSIST (MD1250 / MD1250SO / MD1250GB / MD1250SOGB)

The low profile MD1250 provides flotation assistance with minimum bulk or interference using separate, independently operated left and right side pouches. With the option to wear on a standard or padded LE belt or attach directly to Pouch Attachment Ladder System (PALS) webbing on Modular Lightweight Load-carrying Equipment (MOLLE) vests, the MD1250 is a versatile solution for users who require emergency flotation with minimal bulk or interference with gear.

Using Hydrostatic Inflator Technology, each pouch will automatically inflate when submerged in 4 or more inches of water but not inadvertently due to rain, spray or humidity. The stabilization cap, patent pending, protects the inflator from impact damage that may be seen during a mission. When fitted with the included manual conversion cap, the automatic hydrostatic function can is disabled only allowing manual activation by pulling the beaded handle. This is designed so that the user can set the MD1250 for manual inflation for aviation transport and quickly convert to automatic inflation for maritime operations.

The included manual conversion cap can be installed over the inflator's water inlet port to significantly delay automatic inflation where under water egress is a concern

Will not inflate prematurely due to rain, humidity or wind-driven sea spray

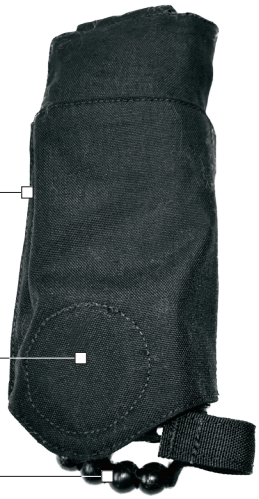

A unique dual strap system allows the MD1250 to be quickly attached to standard or padded Law Enforcement belts up to 3" wide or integrated with a MOLLE style vest, body armor and most other tactical vests

SecureZIP™ closure withstands rigorous activity and is easy to repack.

No inflator maintenance is required for five years, unless inflated

Beaded manual inflation handle

Each unit (left and right) provides 35 lb buoyancy for 70 lb total buoyancy. This high level of buoyancy helps offset the weight of equipment.

A nylon webbing strap with Velcro® attachments located on the front of the bladders allows the wearer to connect the front lobes of the life preserver, once inflated, to better support the wearer in the water. (Not shown)

SOLAS retro-reflective tape not shown.
