Care and use

To assemble the airer, begin by removing all packaging materials. Next, detach the wheels from the airer. With the airer lying flat, unfold it to its full length by carefully lifting the top frame away from the bottom frame. Attach the wheels to the bottom frames, ensuring you match the thickness of the wheel supports; the thicker supports should be fitted onto the inner frame, whilst the thinner ones attach to the outer frame. Once the wheels are in place, stand the airer upright, opening the frames until they form a cross, and secure the brakes by pressing down the lever. From the bottom tier, lift each of the wired shelves and fasten them into position using the hooks on the frame, repeating this for the remaining two shelves. To relocate the assembled airer, first unlock the brakes by lifting the lever. Grasp the opposite corners of the airer and gently wheel it to your desired location, ensuring to lock the brakes before placing any items on it. When it is necessary to collapse the airer for storage, unhook each wired shelf and fold them in, then close the frames to remove the cross. Make sure that the joints in the centre of the frames face away from you; holding the airer at the top, push it down to fold it in half and close it. Please exercise caution by assembling the clothes airer on an even, flat surface and ensuring the wheels are fitted correctly for balance. It is imperative not to drag the airer when the brakes are locked, as this can cause undue strain on the frame. Always distribute weight evenly across the airer, starting from the lower bars, and remember that the maximum load is 15 kg—overloading is not advisable. The airer should never be moved once laden, and take care to avoid trapping fingers when opening and closing it. Lastly, note that this product is suitable for indoor use only.
