

# PRODUCT SPECS

## ALUMINIZED RAYON HEAVY HIGH HEAT GLOVES

High Heat / Foundry Protection • Part #600-ARH

### Features

- Made from 19 oz./sq. yd. aluminized rayon heavy
- Collar lined with green FR cotton
- Front snap closure with split leather tabs
- 30" length
- Adjustable snap wrist
- Part #600-ARH

### ABOUT ALUMINIZED RAYON HEAVY

Aluminized rayon heavy is well known as a comfortable, yet effective, fabric for aluminized protective clothing. It is very flexible and lightweight, which reduces heat stress and fatigue, and enhances the wearer's comfort. Aluminized rayon displays excellent radiant heat, molten aluminum, and iron splash protection according to the EN 531 standard (which has been superseded by the ISO EN 16112), and the ASTM F955 test. This fabric is one of the more economical options available for manufacturing aluminized protective clothing. Recommended for light to moderate molten metal splash; not for heavy molten metal splash.

### KEY FEATURES

- Light and flexible
- Economical
- Great choice if user needs radiant heat and molten metal protection, but does not require high contact heat resistance

## FABRIC DATA & CERTIFICATIONS
