

# TRILOBITE

"...from so simple a beginning  
endless forms most beautiful  
and most wonderful have  
been and are being evolved."

- Charles Darwin,  
Scientist

Seth Robinson

## What did I look like?

Trilobites looked a little like a cross between a horseshoe crab and a bug with a hard exoskeleton.

## Where did I live?

Trilobites lived in shallow water in seas and oceans.

## How long did I live?

Trilobites likely had similar life cycles to crustaceans, though there is no concrete information on their life cycle available.

## What did I eat?

Most Trilobites ate detritus, or dead and decaying animal and plant matter.

## Fun Fact

Trilobite means three lobes in Greek. Some trilobites could roll up to protect themselves.

## Where can you find me?

Trilobites were found in many places around the world.

## How long ago did I live?

Trilobites lived during the Cambrian and Ordovician periods.

## How big or small was I?

Trilobites could be as small as a spaghetti noodle or grow up to two feet long.
