A Junction box location (May also be located in adjacent cabinet.)

B To reduce the risk of tipping of the drawer, the Anti-Tip block must be properly installed located 14-13/16" above the floor on which the Microwave Drawer will sit. The Anti-Tip block must be provided and pre-installed by the purchaser of the product or builder before install can be done. The Anti-Tip block prevents serious injury that might result from spilled hot liquids.

C Cleats may be visible and should be finished to match cabinetry.

D The face of the shelf must sit 1-7/8" back from the face of the cabinet. See installation instructions for further details including the installation of 24" flush mount deflector vent.

Dimensions in parentheses are in centimeters unless otherwise noted. Actual product dimensions may vary due to manufacturing tolerances.
