

MIC® Unitized Tight-Buffered Cable, Plenum

48 fibres, single-mode (OS2)

CORNING

Corning MIC® unitized plenum cables are designed for use in plenum, riser and general purpose environments for intrabuilding backbone installations. These multifibre cables use individually jacketed 900 µm buffered fibres enabling easy, consistent stripping and facilitating termination. The stranded subunits of 6-, 12-, or 24-fibres allow quick and easy identification and are surrounded by dielectric strength members and protected by a flame-retardant outer jacket.

The all-dielectric cable construction requires no grounding or bonding, making these cables ideal for routing inside buildings including riser shafts, to the telecommunications rooms and workstations. The MIC Unitized Riser Cables meet the application requirements of the National Electrical Code® (NEC®) Article 770 and the ICEA S-83-596 test criteria. They are OFNP and FT-6 listed.

This cable is available in 12 different jacket colours – blue, orange, green, brown, slate, white, red, black, yellow, violet, rose and aqua. The coloured jacket allows for easy visual identification of the cables. The standard jacket colour will be determined by the dominant fibre type in the cable and will use the standard part numbers shown here.
