## VOICE CONTROL

JOSH .AI

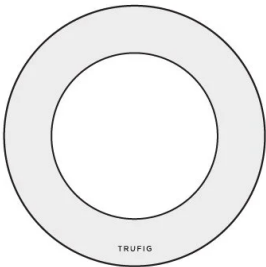

Voice Control is arguably the future of automation. With the ability to dictate complex commands with a conversational voice to transform the atmosphere and activities in a room, Voice Control is a desirable control solution. TRUFIG mounting platforms and fascias help remove bulky, third party Voice Control hardware from the room, pulling them into the architecture for a clean and flush finish.

TRUFIG MOUNTING SYSTEM

TRUFIG for Josh Micro allows Josh voice control hardware to install just below the wall surface, revealing just enough area for the built-in microphone. The device is finished with a flush mounted fascia for discreet technology that blends in with the architecture. The TRUFIG fascia for Josh Micro devices comes in a primer gray, paint ready finish.
