

STYRENE-ACRYLATE COPOLYMER

100 g of styrene-acrylate copolymer (M_w = 100,000) was dissolved in 100 mL of toluene. The solution was cooled to 0°C and 10 mL of 10% aqueous sodium hydroxide solution was added. The mixture was stirred for 1 hour.

Procedure

100 g of styrene-acrylate copolymer (M_w = 100,000) was dissolved in 100 mL of toluene. The solution was cooled to 0°C and 10 mL of 10% aqueous sodium hydroxide solution was added. The mixture was stirred for 1 hour.
