Box Contents
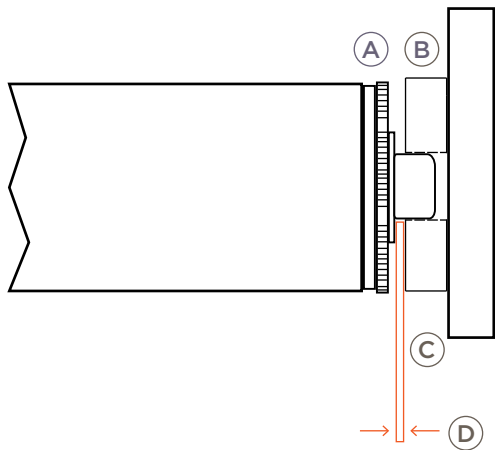

(1) Shade Mount - Inside/Jamb Mount -Drive Side (SHA-B2xx)

(1) Installation Template

(2) #8 Flat Head Mounting Screws

(1) Quick Reference Guide (009-1899-xx this document)

Specifications

| Shipping Dimensions and Weights	
Height	3 in (7.62 cm)
Width	4 in (10.16 cm)
Length	6 in (15.24 cm)
Weight	Shipping: 0.3 lbs (0.14 kg)

Installation Instructions

1. Proper shade fit is essential for reliable functionality. Shades must not be too tight, and require at least $\frac{1}{32}$ of an inch tolerance. This can be measured using the provided installation template cards.

2. If an installation card is unavailable, a credit card should fit between the bracket and tube idler or male/female coupler, far enough to reach the retractable pin. If the credit card does not fit, there is too much pressure on the tube end caps, which may cause the shade to fail.

Ⓑ	Jamb View

Mounting Instructions

1. Place the shade mount onto the wall approximately where it will be mounted. The shade mount should be placed so it covers the hole drilled in the corresponding wall for the power wire installation.

2. This mount may be positioned in many different ways on the wall. The mount can spin 360° and any of the four quadrants may be used for wire installation. However, there are only two holes in the mount for the Mounting Screws.

3. Once a general location is found, ensure the center point of the mount is 1 ¾ inches from any obstructions and mark the two drill spots for the (2) #8 Flat Head Mounting Screws.

4. Drill two pilot holes for the mounting screws at the locations marked in step 3 above.

5. Position shade mount so that pilot holes are visible through the mounting screw ports on the mount.

6. Install mounting screws through holes on shade mount and into the pilot holes created in step 4 above.
