

XIO - Control and Media Drivers for Home Automation Systems

Home automation systems drivers have been released to support the **KEF XIO Soundbar**. These drivers provide essential control functionality—including play/pause, volume control, source switching, and power on/off—as well as content navigation features of media (for supported platforms), enabling users to browse and play music directly through their home automation system's native app.

Each platform requires a separate purchased license*; both the Control driver and Media driver must be acquired individually. Users can purchase the license and download the drivers from our partner page at Intrinsic Dev: www.intrinsicdev.com/brands/kef.

Supported platforms and features include:

- [NICE](#): Control and Media (previously known as ELAN)
- [RTI](#): Control and Media
- [Control4](#): Control and Media
- [Crestron Home](#): Control only
- [Savant](#): Control only*

*Savant is available for free download.

To integrate these drivers into a homeowner's system, a certified installer or integrator is required. Intrinsic Dev provides comprehensive support for dealers, installers, and integrators. Their dedicated online support platform is accessible here: www.intrinsicdev.com/support. Additionally, they offer a YouTube channel with detailed integration tutorials for installers and integrators: www.youtube.com/c/IntrinsicDev.
