

SPL | OW THROUGH HOLE INSTALLATION GUIDE

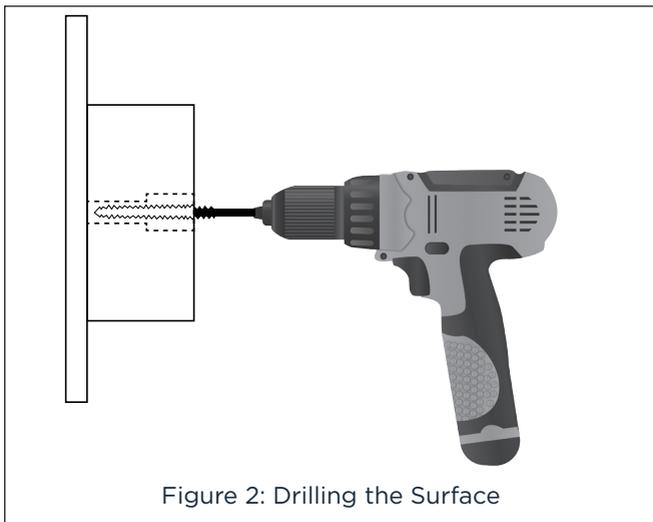

INTRODUCTION

Many James by Sonance On Wall and SPL Soundbar models come with through-holes built-in, placed in the four corners of the products. These through-holes make for easy installation directly to the surface when required. The holes are made to accommodate No.8 screws.

1. Select the surface and position for the speaker to be installed. Ensure the speaker is wired correctly and that the unit has been tested for playback before mounting.

2. Secure to the surface using the appropriate screws for the surface material, ensuring proper positioning and leveling.

3. Attach the speaker grille to finalize the installation.
