

VORTEX 72 CLOSED SUCTION TRACHEAL CATHETERS

LENGTH: 30.5 CM/12 IN

Transparent T-Piece
facilitates visualization
of the pathway

Thumb-control
locking valve
provides precision
control

Color-coded
by French size

Features easy-to-read
depth markings for
accurate suctioning
and improved safety

High-quality outer sleeve is
textured for maximum tactile
feedback during insertion

- Closed system design helps reduce the risk of contamination and exposure to outside pathogens
- Designed for up to 72 hours of use, reducing the need to break the circuit and helping to minimize the risk of ventilator-associated pneumonia (VAP)
- Smooth, flexible tubing allows for more comfortable insertion and greater ease-of-use
- Constructed from high-quality materials for reliable performance during suctioning
- Flex tube provides adjustment and flexibility to the ventilator circuit (available with T-piece or double-swivel design)
- Not made with DEHP

One-way Irrigation Port
helps maintain ventilator circuit
pressure and accepts saline
injections for cleaning

Pressure wiper seal
helps maintain positive
end-expiratory
pressure (PEEP)
