

Processing Procedure Microfiber Wipes & Cloths

- A. Machine wash in hot or warm water, with a neutral detergent. Washing at a high temperature makes the microfibers expand, releasing trapped dirt and microparticles.
- B. Formula: **This formula is only a guideline.** Alterations should be made at the discretion of the laundry professional based on specific requirements, supplies, equipment and experience.

	OPERATION	TIME	LEVEL	TEMP.	SUPPLIES/100LB.
1.	Suds	8 Min.	Low	160°F	8 oz. neutral detergent
2.	Rinse	2-3 Min.	Low	150°F	--
3.	Rinse	2-3 Min.	High	140°F	--
4.	Rinse	2-3 Min.	High	130°F	--
5.	Rinse	2-3 Min.	High	110°F	--
6.	Extract	2 Min.	High Speed		--

- C. To optimize performance of these products:
- The use of chlorine bleach is **not recommended** due to potential color and strength loss if not properly used/controlled.
- The use of fabric softeners can decrease the absorbency of the microfiber material.
- Mixing with terry towels or other materials could cause cross contamination of lint. Microfiber products should be washed separately.
- If a Built Detergent is used, it is necessary to completely rinse it out of the product and use a laundry sour to ensure the final pH of the product is 7.0 or below.
- D. Tumble dry at 120°F (Low Heat).
