

## Watch it Glow

Charge the stickers under a bright light. When you turn off the lights, watch your aquarium glow!

Now you have your own magical axolotl aquarium to display, play, and enjoy.

**NOTE:** The gel solution is made from a non-toxic, environmentally friendly polymer powder. Like tiny sponges, the powder has super-absorption capabilities. It is often used in potting soil to keep plants hydrated.

Any leftover gel can be stored in resealable bags to use later. You can also pour it into a pan for squishy sensory play. If the solution is allowed to dry out, it will eventually return back to powder and can be rehydrated. This may take several days.

**Gel solution should be discarded in a trash can.**

**Do NOT place the gel or magic mix powder down the drain.**

# Glowing AXOLOTL AQUARIUM

## What is an Axolotl?

Axolotls are aquatic salamanders native to Mexico. Known for their cute smiling faces and feathery gills, axolotls are often illustrated in a rainbow of colors. In nature, real axolotls are mostly brown or grayish in color. Axolotls bred in captivity may be light pink with pink feathery gills.

## You will need

- Room temperature water
- 2 Mixing bowls
- Measuring cup
- Spoon
- 2 Resealable plastic bags (optional)

## Decorate the Aquarium

Using the color stickers, glow stickers, and bubble rhinestones, decorate the outside of your aquarium.

Don't forget to decorate the top of the lid.

## Creating the Aquarium

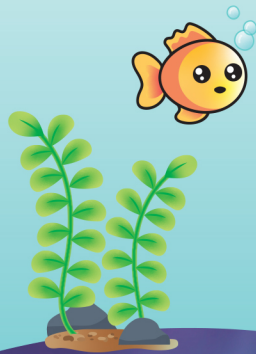

Pour your blue and green magic mix powder into separate bowls.

Add 2 cups of water to each bowl. Stir until thickened.

Watch as the powder expands like magic, creating a bubbly gel solution!

3 Add half of the foam bubbles to each color gel and stir using the stick or spoon.

Layer the blue and green bubble gel inside your aquarium using a spoon.

Stop when you reach the bottom of the threaded section of your jar.

*The gel will be thick; this helps keep the axolotls and bubbles in place.*

## Add the Axolotls

Use the stick to push and arrange the axolotls in your aquarium. Press them up against the sides of the jar so you can see them better.

Add the lid to help keep the gel from drying out.
