

Kwikset

Electronic Deadbolts and Levers with Home Connect Technology

HOMEOWNER BENEFITS

Kwikset locks with Home Connect technology provide a smarter way to expand security and home automation systems to a complete line of wirelessly enabled door locks. Control the lock from anywhere using a smart phone, tablet, or internet connected device through the security/home automation system app.

- Remote Locking and Unlocking
- Notifications of Lock’s Activity
- Access Control
- Integration with Other Smart Devices in the Home

KEYLESS ENTRY

A key-free lifestyle means no more fumbling for keys, no more losing keys, no more lockouts. With customizable user codes, homeowners can enter their home with just a few simple pushes of a button. Homeowners also get more control over who has access to the home. Kwikset electronic locks can store multiple user codes and can be scheduled to allow access at pre-selected times and recurrences.

REMOTE ACCESS

Homeowners can access and manage their lock from anywhere for ultimate control over their security and peace of mind. With Kwikset electronic locks, homeowners can lock and unlock doors from anywhere with an internet connected device, receive notification alerts of lock activity, and check the status of the lock while away from home.

HOME MANAGEMENT

Kwikset locks with Home Connect technology speak to the security system or home automation controller, allowing homeowners to set-up scenes and trigger events. From arming/disarming the alarm, to lights turning off/on, and the thermometer adjusting to the right temperature, it all starts with the Kwikset lock.

ANSI/BHMA* Certification requires that products are tested and audited, leading to higher design specifications and manufacturing procedures for operation, key torque cycles, pull strength, impact resistance, and finish. All Kwikset electronic locks and smart locks are certified to meet or exceed ANSI/BHMA requirements.

* ANSI/BHMA is an independent industry organization that certifies builders hardware product

SmartKey Security™ provides strong resistance against advanced forced entry techniques. It also allows you to re-key the lock yourself so all your Kwikset locks share one key.

DEALER BENEFITS

Selling on the benefits of incorporating access control

- Safety & Security
- Remote Access Control
- Energy Management

- Everyday Convenience
- Connected Lifestyle
- “While You Were Out” Peace Of Mind

There are many drivers for why incorporating connected locksets into your customers total security solution will provide otherwise unseen benefits – it’s up to you to understand what will motivate a particular homeowner. This understanding will lead to a mutually beneficial scenario for everyone – the customer has been given something of added value to their home life and your business has grown because of it. What does the connected lock mean to you?

INCREASE SYSTEM USAGE

The end consumer may not interact with their security panel on a daily basis, however what they will interact with is their entryway. By creating direct links from your lockset to your security panel, you are creating a lifestyle in which the system is being used on a regular basis.

INCREASE CUSTOMER RETENTION

By delivering a lifestyle in which the end consumer is interacting with their smart devices on a daily basis and coming to rely on the routine benefits provided, they have now entered the mindset where life any other way is unimaginable, turning customer retention into an automatic transaction.

INCREASE RMR

By building varying levels of custom packages (think Good, Better, Best scenarios) that deliver desirable system features and benefits via the products that are included, you can help drive movement towards increased RMR.

PROVIDE THE TOTAL SECURITY SOLUTION

Integrating a connected lockset is no longer just about access control. By creating connections, or scenes, from the lock to other devices in the home such as doorbells, video cameras, alarm panels, thermostats, lighting and more, you are providing a total home security solution that protects what matters most.

The Obsidian is an extremely slim, modern, key-free smart lock designed for homeowners who love contemporary design. It is the lowest profile smart lock in the industry, with a dark, sleek interface that pushes the boundaries of design in the touchscreen lock category. It features patented SecureScreen™ technology to prevent code detection from fingerprints on the touchscreen.

OBSIDIAN

TOUCHSCREEN ELECTRONIC DEADBOLT

Obsidian Touchscreen Deadbolt

Innovation for the world you live in.

We are dedicated to putting countless hours of research and development into simplifying your life. The technology that we create doesn't just change the way locks work, it provides convenient features that change the way people live. Because at the end of the day, it's your world and we're here to protect it.

Electronic Deadbolts and Levers with Home Connect Technology
