

James

BY SONANCE

FXA SERIES

FXA550S

SOLD AS EACH

The FXA550S from James by Sonance offers an in-ceiling and in wall solution for challenging coverage areas featuring a virtually flush angled baffle design, it excels in off-axis performance for LCR and surround applications including immersive formats. The full 3-way design allows downward coverage to adhere to many 3D immersive specifications such as Atmos, Auro3D and DTS:X. A beryllium tweeter provides the ultimate in high fidelity performance as well as timbre matches James BE Series models. Durable aluminum construction enables outdoor and marine use. Custom options available. Assembled and tested in the USA.

KEY FEATURES

Along with the BE tweeter, dual 3" high excursions mid-range transducers are mounted on the main baffle which is angled at 30 degrees towards the listening area. Dual 5.25" woofers are angled on the adjacent baffle at 20 degrees to provide full bass response. All woofers are designed with aluminum cones, Santoprene surrounds and die cast baskets to be marine ready. All enclosures are constructed with aircraft grade 5052 aluminum and aluminum white paintable grilles.

FEATURES AND BENEFITS

- CDX crossover delivers consistent off-axis response
- Neutral voicing eliminates need for speaker correction
- Premium drivers optimized for theater dynamics
- Robust construction for long-term reliability
- Four models covering all theater applications
- Simplified calibration process saves installation time
- QX style BE806 MKII supports QX style grille finish
- FXA550S-PB: Galvanized steel pre-construction board
