

### Fill-Flush® and Simple Touch®

#### Clean Whirlpools Before, During and After

MTI's Fill-Flush® and Simple Touch® have set the standard for self-cleaning whirlpool systems, and they remain unparalleled in the industry. When used on a regular basis, either system will keep the internal whirlpool system clean and hygienic. In short, they are the best whirlpool cleaning systems on the market.

Both systems clean all internal plumbing components of the main whirlpool system. Concentrated detergent is backflushed through the entire plumbing harness one line at a time in fewer than 5 minutes with less than 10 gallons of water. See detailed operation instructions on the following pages or learn more by watching an animated demonstration at [mtibaths.com](http://mtibaths.com).

#### Fill-Flush

- Tub fills through the full-sized whirlpool jets. No filling spout required with Fill-Flush.
- Must specify stub-out location on order. Select from one of the numbered locations on the particular tub model's specification sheet.
- Hot and cold valves are not included.
- Fill-Flush connection to incoming water supply and installation of hot/cold valve set should be performed on-site by licensed plumber. See installation guide for details.
- Customer supplied hot/cold valves may be factory installed when specified on order. See order packages below.

#### Simple Touch

- Filling spout required. MTI does not provide a filling spout.
- Automatic operation with the Simple Touch of a button. Auto shut-off after 3 minutes.
- Must specify stub-out location on order. Select from one of the numbered locations on the particular tub model's specification sheet.
- Simple Touch connection to incoming water supply and installation of customer supplied faucet and valve set should be performed on-site by licensed plumber. See installation guide for details.
- Simple Touch components must be accessible.
- Electrical requirements: 1 amp, 110 VAC.

#### Proven Effectiveness

The effectiveness of MTI cleaning systems has been validated by The National Sanitation Foundation (NSF). Tests conducted on the MTI Fill-Flush and Simple Touch systems with Fresh Wave cleaner prove that MTI's cleaning system meets the bacteria cleaning requirements for pools and spas, as specified by NSF / American National Standards Institute (ANSI) in Standard 50 – a standard requiring a 99.9% reduction in *Streptococcus faecalis* and *Pseudomonas aeruginosa*.

MTI's Fill-Flush and Simple Touch systems are highly effective in maintaining the cleanliness of the components of the main whirlpool system. Micro jets will need to be cleaned in the conventional way. See whirlpool cleaning instructions in owner's manual.

#### Cleaning System Package Options

1. Fill-Flush without valves (Stub-out) (FFSO) **\$620**
2. Fill-Flush with customer-supplied valves, factory installed. (FFCS) **\$725**
  - Send ONLY the Rough-in Valve. DO NOT send the decorative part of the handle kit.
  - Rough-in Valve MUST BE RECEIVED BEFORE production of the tub can begin.
3. Simple Touch® Factory Installation (FFE) **\$1,070**
  - Rough-in valves not included.

**Indicate Fill Flush or Simple Touch stub-out location on diagram when ordering.**

**Select from one of the numbered locations on the particular tub model's specification sheet.**
