

Pluglock INSTRUCTIONS

The PLUGLOCK is the secure solution to the “Wall Wart” problem. Install the PLUGLOCK safely out of sight in the back of your rig or component rack, and the five widely spaced locking outlets secure all of your bulky transformers or traditional plugs in place. The sturdy, all steel construction and circuit breaker protected design ensure maximum durability while protecting your valuable electronic equipment from power interruptions due to accidental cord disconnections.

The unique adjustable clamping system accommodates transformers and traditional plugs from 0.4” to 2.1” above each outlet. To adjust outlet clamps, simply turn thumbscrews (located on rear panel) left (counterclockwise) to loosen, adjust to your desired height, then turn thumbscrews right (clockwise) to tighten and secure the transformer or plug in place.

IMPORTANT SAFETY INSTRUCTIONS:

- 1) Please read all instructions.
- 2) Keep these instructions for future reference.
- 3) Heed all warnings and safety instructions.
- 4) Follow all instructions.
- 5) Do not use the PLUGLOCK in or near water.
- 6) Always protect the power cord from being walked on or pinched particularly at receptacles, and at the point which the cord exits the PLUGLOCK.
- 7) **WARNING:** This device must be connected to an AC outlet with a protective earth ground connection.
- 8) The AC plug shall remain unobstructed and readily operable.
- 9) **WARNING:** Do not expose to rain or moisture.

Note that the PLUGLOCK is a power distribution device only, and offers no conditioning or surge protection functions, making it an ideal extension to an existing Furman power management component.

MAXIMUM LOAD:

The five outlets are protected by a circuit breaker rated at 15 Amps, which is equivalent to 1800 Watts at 120 Volts. If the total load on the PLUGLOCK (combining all outlets) exceeds 15 Amps, the circuit breaker (located on the side panel) will trip, cutting off power to all connected equipment. Should this happen, reduce the load by unplugging one or more units from the PLUGLOCK, then push the circuit breaker button in to reset it. The PLUGLOCK is a cCSAus safety agency listed product.

CAUTION:

Only for use with 15 Amp circuits utilizing a minimum of 14 AWG.
