Instruction Guide

FCC COMPLIANCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Warranty Information

This product is backed by a one year warranty. In addition StarTech.com warrants its products against defects in materials and workmanship for the periods noted below, following the initial date of purchase. During this period, the products may be returned for repair, or replacement with equivalent products at our discretion. The warranty covers parts and labor costs only. StarTech.com does not warrant its products from defects or damages arising from misuse, abuse, alteration, or normal wear and tear.

Limitation of Liability

In no event shall the liability to StarTech.com Ltd. (or its officers, directors, employees or agents) for any damages (whether direct or indirect, special, punitive incidental, consequential, or otherwise), loss of profits, loss of business, or any pecuniary loss, arising out of related to the use of the product exceed the actual price paid for the product.

Some states do not allow the exclusion or limitation of incidental or consequential damages. If such laws apply, the limitations or exclusions contained in this statement may not apply to you.

Troubleshooting

If you encounter any problems, first make sure all cables are firmly seated at both ends and connected to their proper ports.

Also note that the SV201/SV401 are designed to work with PS/2 and AT keyboards. Older XT (84 key) keyboards will not work. As well, some notebook computers such as the IBM Thinkpad and Toshiba Terca have trouble working with the SV201/SV401 when their mouse and keyboard ports are used simultaneously. To avoid this problem, only connect the mouse OR the keyboard port to the switch.

Problem: Keyboard is not responding.

1. Keyboard needs to be reset. Unplug keyboard from console, then plug it back in.
2. StarView needs to be reset. Turn off computers and StarView, wait five seconds, turn StarView back on, turn computers back on.

Problem: Mouse does not respond correctly.

1. StarView is in AutoScan mode. Press space bar to exit.
2. Mouse needs to be reset. Unplug mouse from console, then plug it back in.
3. StarView needs to be reset. Turn off computers and StarView, wait five seconds, turn StarView back on, turn computers back on.

Problem: Video problems.

1. Resolution/bandwidth is too high. StarView supports VGA, SVGA, Multisync and XGA (interlaced, with resolution up to 1920 x 1440 @ 80MHz). The maximum bandwidth is 180 MHz.
2. Cable quality too low. Use high quality co-axial cables. Contact StarTech.com for details.

Problem: Pressing hot-keys gets no response.

1. Selected port connects to powered-down computer. Change to active port using push-button.
2. StarView is in Auto Scan/Last-Next mode. Press space bar to return to normal.

Introduction

Thank you for purchasing a StarTech.com StarView KVM switch. This space-efficient, reliable, and cost-effective KVM switch provides an ideal solution for call centers, help desks, and SOHO environments where the ability to use multiple PCs is necessary. You can easily connect and operate two (SV201) or four (SV401) computers from one monitor, keyboard, and mouse. And you can easily switch between computers by simply pushing a button or entering a quick hot-key command.

Features

- Allows one console to control two or four computers
- Allows PCs to be quickly switched through push-buttons or hot-key commands
- Allows connection and removal of PCs without powering down
- 200 MHz bandwidth allows resolutions up to 1920x1440 @ 60Mhz
- Emulates keyboard and mouse while booting so PCs can boot unattended
- Backed by StarTech.com's one year warranty

Before You Begin

To ensure a quick and easy switch installation, please read through this section carefully before attempting to install the switch.

System Requirements

- IBM-compatible computers with VGA, SVGA, or Multisync card
- One monitor (must be capable of synchronizing with each computer's video signal. Check your monitor's user manual for more information)
- One PS/2 keyboard and mouse
- Extender cables (not included)

NOTE: StarTech.com offers a variety of three-in-one KVM cables to optimize signal integrity and simplify layout and connections. For product information, visit www.startech.com and click on the **All Parts** tab. Follow the **StarView/KVM Cables** link that is available under the "Cables" heading and select the **Universal KVM Switch Cables**.

Contents

This package should contain:

- 1 x KVM switch

Last/Next Mode (SV401 Only)

The Last/Next feature allows you to quickly switch back and forth manually between computers. It differs from Auto Scan mode in that you are able to dwell on a particular port for as long or as little as you like, as opposed to the fixed interval of Auto Scan mode. Activate Last/Next mode by using the following hot-key combination:

- Press and release **Alt+Ctrl+Shift**, then press and release **9**, then press **Enter**.

Once Last/Next mode is activated, you can scroll to the **previous** computer by pressing the **Left Shift**, or to the **next** computer by pressing the **Right shift**. The switch will remain in Last/Next mode until you press the **Space Bar**. The port that was active at that time will remain active.

NOTE: While in Last/Next mode, no other keys will function. You will have to first exit Last/Next mode by pressing the space bar.

Monitoring Your Switch

The LEDs on the switch are your best indication of the switch's activity.

LED Activity	Meaning
On (Steady)	Corresponding PC is active
Off	PC is not selected
Flashing (On/Off Equal)	Corresponding PC is active and is being accessed through Auto Scan mode
Flashing (On long, Off short)	Corresponding PC is active and is being accessed by Last/Next mode (SV401 only)

Connecting the computers

1. Connect one end of your connector cables into open CPU monitor, keyboard, and mouse ports on the front or back of the switch.
2. Plug the other end of the cables into the monitor, keyboard, and mouse ports on the back of the computer.

Repeat steps 1-2 for any other computers you want to connect to the switch. Your KVM switch is now ready for use.

Using Your KVM Switch

Switching Computers

The LEDs on the front panel of the switch indicate which computer is active. To switch between computers, use the **Select** push-button on the right side of the switch to scroll through the computers, or enter one of the following hot-key combinations:

SV201

- Press and release the **Left Control** or **Right Control** key twice, followed by the number that corresponds to the port letter (Port A=1, Port B=2, etc.).

SV401

- Press **Ctrl+Alt+Shift**, followed by the number that corresponds to the port letter (Port A=1, Port B=2, etc.).

Auto Scan Mode

The StarView SV201 and SV401 allow you to automatically scan between PCs at regular intervals so that you can monitor their activity without having to manually switch between computers. To begin Auto Scan mode, use the following hot-key combinations:

SV201

- Press and release the **Left Shift** key, then press and release the **Right Shift** key.

SV401

- Press and release **Ctrl+Alt+Shift**, then press and release **0** (zero), then press **Enter**.

The switch will remain in Auto Scan mode until you press the **Space Bar**. The port that was active at that time will remain active.

NOTE: While in Auto Scan mode, no other keys will function. You will have to first exit Auto Scan mode by pressing the space bar.

Installation

This section will guide you through the installation of your StarView switch. Please read through the instructions carefully and complete each step in the order listed.

SV201 shown

NOTE: Make sure that all devices are turned off before beginning installation.

Connecting the console

1. Plug your monitor into the labeled monitor port on the left side of the switch.
2. Plug your PS/2 keyboard and mouse into the labeled ports on the left side of the switch.
