

CALI[®] bamboo

Mocha

A smarter floor for a greener home.

CALI engineered bamboo flooring features all the benefits and beauty of a solid Fossilized[®] bamboo floor, but is made for more temperamental spaces like kitchens, bathrooms, and basements. Each plank combines an extra-thick 3mm top wear layer of bamboo over a sustainable wood core, delivering the hardest engineered floor on the market with a 3,300+ Janka equivalent rating. Its innovative design means planks require 60% less acclimation time and include wider options -- resulting in speedy, sturdy installations.

Available Colors

Natural (wide)

Mocha (wide)

Java (standard)

Antique Java (wide)

An Installer's Dream Floor

A more dimensionally stable construction means less acclimation time (72 hours vs. the 5 day minimum for most solid hardwoods) and wide plank options mean faster installations.

13 Coat Scratch-Resistant Finish

That's three coats more than our hardest solid bamboo floors, helping to protect the top wear layer from large pets, kids, furniture, and heavy traffic.

50 Year Guarantee in Every Room

Fear not the below grade installation! Even tricky spaces will still be backed by a 50 year residential warranty. These floors are designed to thrive where others cannot.

Construction	Engineered Bamboo - Green to the Core
Species	Bamboo
Plank Length	36" (standard) 72¾" (wide)
Plank Width	3¾" (standard) 5¼" (wide)
