GARDENING HINTS:

Your garden should begin to sprout in 3-5 days. For best results, keep your Terrarium in a warm sunny place. If your seeds are not sprouting, check that the soil is damp, misting as needed.

Note: If your garden gets too wet or humid you may notice some new fuzzy growth appear. Remove the lid and let your garden dry a bit – air circulation helps. The fuzzy growth is nature's way of breaking down the seeds and plant material to create new soil and it is not harmful to your health.

Over time, your garden will need to be replanted. You can use any leftover materials and plant it again, or buy new seeds and soil. These are available at any garden center.

WATCH THE SEEDS SPROUT IN 3-5 DAYS!

Includes playful Panda figure!

#1137000TG Grow N' Glow Terrarium Panda

GROW N' GLOW Terrarium

PANDA

PANDA FUN FACTS

1. Panda bears can be found in the deep bamboo forests of China - where they spend their days living a cozy, peaceful life.
2. Pandas are vegetarians and mostly eat bamboo. They can munch up to 40 lbs of bamboo every single day!
3. All that snacking makes them sleepy, so pandas spend much of their day eating and then curling up for long, relaxing naps. The perfect life!
4. Baby pandas are teeny tiny at birth - about the size of a stick of butter and looking like cute little pink jellybeans.
5. Even though grown pandas look round, soft, and cuddly, they are surprisingly athletic. They are great climbers and swimmers and can scramble up trees like pros.

WHAT'S A TERRARIUM?

A Terrarium is a miniature garden created in an artificial environment. Small plants, rocks and garden themed accessories are often included. These gardens are planted as a fun hobby or for educational purposes.

GET READY TO GROW!

Lay out some newspapers or paper towels to work on. This will help keep your area clean while you plant.

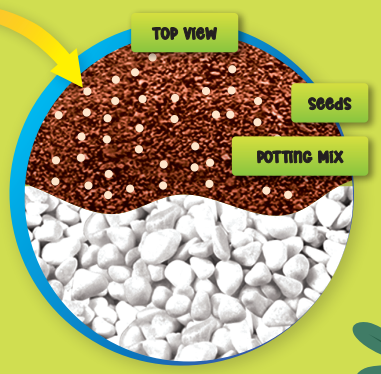

HELPFUL HINT: Use a few Chia seeds now, and save the rest to replant later. Please note - planting too many seeds at one time will cause overcrowding and lack of growth.

LAYERS

Open your potting mix and add a small amount of water. Squish the bag until it clumps together like clay, adding more water as needed. If your soil is too wet, press a paper towel onto the surface to remove any excess moisture.

- Create small layers so your chia has room to grow. Save the extra materials to replant later.
- Use the mister bottle and water to dampen each layer as you go. This will help keep them in place.
- Layer the potting mix and sand as shown.
- For the top layer, place the stones in front, leaving an area of potting mix in the back for planting. See TOP VIEW image.
  Sprinkle a few chia seeds in the potting mix.
- Once the layers are complete, mist the top of the soil until it's very damp.
- Set the Panda figure inside.

PUT A LID ON IT

When you are done planting, add your starry sky lid.

DECORATE WITH STICKERS

Your kit includes decorative and glow-in-the-dark stickers. Place them on the outside of the jar to add a little enchantment to your terrarium.

NOTE: As you place the stickers, be careful not to tip the jar or the layers will shift and mix together.

Shine a bright light or place the stickers in a sunny window to charge them - then watch them glow in the dark!
