

Circa® Bed Wrap Fabric Care Instructions

CIRCA FABRIC CARE

Circa should only be spot cleaned when visible stains or soils are present. Light brushing to remove dust and grime can be used on a more frequent basis. Please note the face covering has been treated with a stain resistant finish to minimize staining.

For spot cleaning, using a Citrus Based Cleaner (D'Limonene) on the stained area is recommended. Apply solution sparingly to cotton cloth and blot onto stain gently. Wipe area with dry cotton cloth to absorb stain and residual cleaner. Repeat as necessary. Do not apply cleaner directly to Circa face cloth and avoid excess pressure when blotting and wiping stained area.

Prior to cleaning, pretesting a small-concealed area of the fabric with the cleaning solution to be used is suggested to ensure no objectionable discoloration is noted.

Caution: The use of water-based or detergent-based solvent cleaners may cause puckering and or swelling of the substrate.
