

Systemic Design

Systemic design is a design approach that considers the entire system and its interactions, rather than just individual components.

Systemic Design	Traditional Design	Design Thinking
Focuses on the whole system and its interactions.	Focuses on individual components.	Focuses on user needs and experiences.
Considers the entire system and its interactions.	Considers individual components in isolation.	Considers user needs and experiences.
Emphasizes collaboration and cross-functional teams.	Emphasizes individual roles and responsibilities.	Emphasizes user-centered design.
