

SONANCE

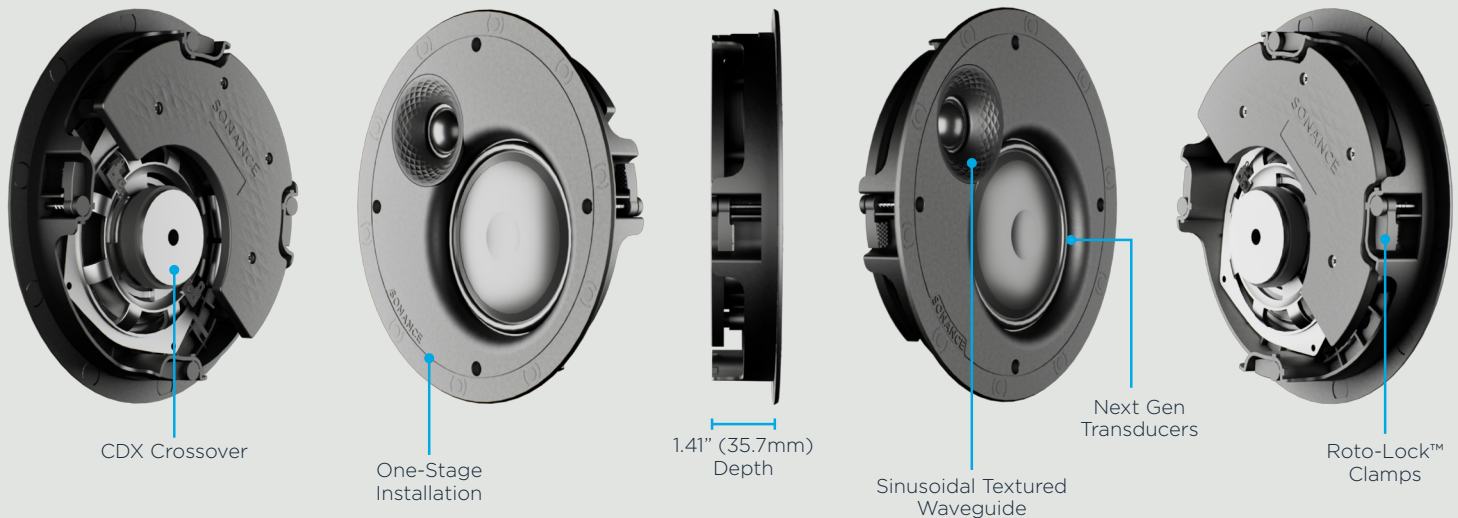

VISUAL EXPERIENCE ULTRA THIN-LINE

VX52R UTL

Sonance Visual Experience Ultra Thin-Line speaker represents expert innovation of performance and design, delivering room-filling sound from an elegantly ultra slim profile. These architectural speakers combine advanced acoustic engineering that accommodates for challenging room architecture and space limitations; delivering Sonance VX into more hard-to-reach applications, even in 2.5" metal framing for concrete construction.

KEY FEATURES

Sonance Visual Experience Thin-Line speakers accommodate for shallow construction and limited space. Available for in-ceiling or in-wall, and selections for performance level and Single Stereo Technology, VX Thin-Line models will complement the advanced performance of the standard Sonance VX Series models.

FEATURES AND BENEFITS

Shallow Depth Design: Engineered to fit 2.5" metal framing in concrete ceiling applications, opening VX performance to MDUs, high-rises, and challenging builds.

VX Transducer Technology: Next-generation drivers deliver the high-fidelity performance and dynamic range the VX Series is known for, now in an ultra-slim form factor.

VX Waveguides: Sinusoidal textured waveguide design ensures consistent tonality and optimized dispersion across the listening space.

VX Grilles: Available in micro trim and trimless paintable grilles in Sonance brilliant white, disappearing beautifully into any ceiling.

Decreased Depth: At just 1.41" (35.7mm) (3mm thinner than ever) the VX52R UTL fits where standard speakers simply can't.

One-Stage Install: The same intuitive, award-winning installation process as the full VX Series. No learning curve, no extra steps.
